

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name phama21-huangr86

Your Name Ricky Huang

Your Team Member's Name Tommy Pham

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

During this project, me and my team member, split up the work according to the iterations in the project manual. I worked on iteration 1A, and iteration 2A whilst also aiding my partner in iteration 2B. As for the remainder of the project such as iteration 3 and the bonus, we met up after classes, problem solved together and finishing the rest of project.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

My project partners contribution to this project was that they worked on Iteration 1B, Iteration 2B and aiding me in some problems I had whilst doing Iteration 2A. Additionally they also contributed with the coding, problem solving and debugging on iteration 3, bonus and commenting.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

My experience during the development of this project went very well as I learned the difference between solo coding and coding alongside a team. It was very beneficial as it provided a different way to debug any errors I had, as anytime a problem occurred my team member could look at my code then give any feedback or point out any areas in the code that may seem wrong. However, because we both have very busy schedules, setting up meeting times or communicating about the code would sometime prove to difficult.
